High Seas Yacht Service to be Aquadrive Sales and Service Center

High Seas moves to expand its services as Florida's leading provider of precision marine running gear alignments.

Fort Lauderdale, FL – July 27, 2009 – High Seas Yacht Service, (www.highseasyachtservice.com) announced the addition of products from the Aquadrive Division of Mack Boring and Parts Company to its growing roster of industry leading companies to have selected High Seas to be an official service center.

“Mack Boring selected High Seas based on our service history with Aquadrive products,” said Chris Brown, High Seas General Manager. “Our technicians work hard to perfect their professional and technical expertise. We couldn’t be more pleased to have a company like Mack Boring, an industry leader in marine transmission systems, reward us for our efforts with this selection.”

Aquadrive anti-vibration systems isolate the engine from the rest of the boat, resulting in greatly reduced noise and vibration in the vessel. Most installations result in a 50% or more reduction in cabin or cockpit noise and vibration. Aquadrive also helps keep driveline in good condition by minimizing wear and tear on the transmission and cutlass bearings.

“We selected High Seas to represent our products in the South Florida region because of their specialized knowledge and expertise of marine drive trains,” stated Jim Blaney, Aquadrive Product Manager for Mack Boring and Parts. “High Seas is proficient at analyzing and repairing any rotating equipment behind the engine. Since they are recognized specialists in solving alignment and vibration problems, they appreciate the unique technology available only with Aquadrive Systems from Mack Boring and Parts Co.

About: High Seas Yacht Service is a full service company dedicate to precision alignments and elimination of running gear vibration. For more than 30 years, High Seas has serviced marine propulsion systems in South Florida. The company uses state-of-the-art optical scope technology and laser optic technology for precision alignments from strut to engine. High Seas also performs deck targeting on larger, flexible yachts. Its sister company, Straight Line Marine is a dedicated, on-site machine shop specializing in straightening shafts up to six inch diameter, shaft cladding (weld-over), coupler repair and custom fabrication. High Seas is located on-site at Lauderdale Marine Center or can service boats in open yards from West Palm Beach to Miami.

About Mack Boring:

Established in 1922, Mack Boring and Parts Company is a leading distributor of Yanmar, Isuzu and Mitsubishi marine and industrial engines, marine transmissions and GKN Aquadrive Systems. Mack Boring also designs and supplies its own line of industrial generators – GPP – Global Power Products. Mack Boring and Parts Company has been continuously owned and operated by the McGovern family who have recently added the “SEAKEEPER” line of gyro stabilizers as a new product line.
