

High Seas Yacht Service adds marine hydraulics repair and maintenance to its line of specialized yacht services with the opening of High Seas Hydraulics

Fort Lauderdale, Florida – November, 2013 – [High Seas Yacht Service](#), a leader in marine running gear repairs, announces the addition of marine hydraulics repair and maintenance to its portfolio of specialized services for the marine industry. Operating under the name of [High Seas Hydraulics](#), the Company has a dedicated staff of trained mechanics specializing in all marine hydraulics including:

• Steering systems	• Stabilizers
• Bow thrusters	• Passerelles
• Cranes and Davits	• Cylinder Rebuilds
• Anchor windlasses	• Trim tabs
• Besenzoni and Opacmare	• Nautical Structures

In addition to field services, High Seas Hydraulics has Parker crimping equipment to make hydraulic hoses in-house up to 1-1/4 inches in diameter and stocks common hoses and fittings. The Company also specializes in re-building and stress testing hydraulic cylinders. Rebuilding of custom cylinders is easy with the help of the existing in house machine shop, Straight Line Marine.

High Seas expanded its facilities at Lauderdale Marine Center by adding a dedicated location for High Seas Hydraulics. The new facility has an air conditioned clean room for cylinder and hose building.

In addition to the new hydraulics services, [High Seas Yacht Service](#) and its machine shop subsidiary [Straight Line Marine](#), offer: Laser Deck Targeting, Optical Scope Running Gear and Engine Alignments, Shaft Straightening up to 8 inches in diameter, Strut and Rudder Repair, Cutlass Bearing Replacement, Shaft seal expertise, ABS and Lloyds certifications.

“Opening High Seas Hydraulics to deliver hydraulic repair and maintenance was a natural progression for High Seas Yacht Service,” commented Chris Brown, GM and President of High Seas. “Our mission is to continue to provide our customers with high quality services across clients’ multiple disciplines in the Marine Industry to help ensure a quality experience with their vessels.”

About High Seas Yacht Service

High Seas Yacht Service is a highly specialized company dedicated to precision engine, strut and shaft alignments for the elimination of running gear vibration. For thirty years High Seas has serviced marine propulsion systems in South Florida. We use state-of-the-art [optical scope technology](#), laser and reflective optic technology for precision alignments from strut to engine. We perform [deck targeting](#) on larger, flexible yachts.

[Straight Line Marine](#), a wholly-owned subsidiary, is a full service machine shop dedicated to shaft, strut and rudder straightening for precision alignments and the elimination of running gear vibration. Straight Line Marine can straighten shafts up to 6 inches in diameter and perform [shaft weld-overs \(cladding\)](#). We are [ABS Certified](#) for Aquamet Stainless Steel Shaft Cladding – the only machine shop in the state of Florida. We also perform crack testing and straightening for Lloyds and ABS shafts.
